## The global leader in motion and control technologies

### A world class player on a local stage

#### Global Product Design

Parker Hannifin has more than 40 years experience in the design and manufacturing of drives, controls, motors and mechanical products. With dedicated global product development teams, Parker draws on industry-leading technological leadership and experience from engineering teams in Europe, North America and Asia.

#### Local Application Expertise

Parker has local engineering resources committed to adapting and applying our current products and technologies to best fit our customers' needs.

#### Manufacturing to Meet Our Customers' Needs

Parker is committed to meeting the increasing service demands that our customers require to succeed in the global industrial market. Parker's manufacturing teams seek continuous improvement through the implementation of lean manufacturing methods throughout the process. We measure ourselves on meeting our customers' expectations of quality and delivery, not just our own. In order to meet these expectations, Parker operates and continues to invest in our manufacturing facilities in Europe, North America and Asia.

# Variable Speed Drive - AC10 Series

## Overview

### Description

AC10 Micro Drive is a simple, reliable and economical solution to every-day motor control applications requiring speed or torque control within the power range of 0.2 kW to 15 kW. Having compact dimensions and features normally only associated with higher specification drives, including, sensorless vector mode, output frequency up to 650 Hz, 3 phase 400 V supplies in all 5 frame sizes and a full 150 % overload at 0.5 Hz for 1 minute, AC10 provides an optimised solution for OEM machine builders looking for a compact, cost-effective drive without compromising on performance.

### Features

#### Simplicity

AC10 is designed to reduce the time and effort required to install, setup and commission through its easy to use integrated keypad. Minimal wiring requirements and two easily accessed terminal rails make AC10 fast and simple to install, having you up and running in no time at all. Auto-tuning sensorless vector mode takes AC10 beyond simple V/Hz control allowing users requiring greater dynamic speed or torque control for their application to benefit from the drives enhanced 0.5 % speed and 5 % torque accuracy.

#### Reliability

Proven technology and manufacturing techniques ensure AC10 has been engineered and built to deliver consistently outstanding levels of performance day in, day out ensuring maximum uptime and productivity. Thanks to its conformally coated PCBs, AC10 is able to withstand even the most arduous class 3C3 environment which many other drives in this class would struggle with, allowing you to operate AC10 with the utmost confidence in more applications

### Technical Characteristics - Overview

<b>Power Supply</b>	220 ... 240 VAC $\pm 15$ % Single Phase 220 ... 240 VAC $\pm 15$ % Three Phase 380 ... 480 VAC $+10$ % $-15$ % Three Phase
<b>Input Frequency</b>	50/60 Hz
<b>Power Range</b>	0.2...15 kW
<b>Operating Temperature</b>	0...40 °C
<b>Protection</b>	IP20
<b>Analogue Inputs</b>	2x (0-10 V, 0-5 V, 0-20 mA, 4-20 mA)
<b>Analogue Outputs</b>	1x (0-10 V, 0-20 mA)
<b>Digital Inputs</b>	5x 24 VDC
<b>Digital Outputs</b>	1x 24 VDC
<b>Relay Output</b>	1x 5 A @230 VAC

## IE2 Efficiency MR Series AC Induction Motors

An ideal complement to AC10, the MR Series AC Induction motors are IE2 efficient and start from a power range of 0.09 kW. Featuring optional axial in-line force ventilation fan and holding brake, the MR motor is a high quality durable AC motor which when matched to the AC10 will provide you with a complete motor/drive package that will deliver optimal performance in your application.

## Flexible I/O

- Freely assignable digital inputs and outputs, and relay output to suit your application needs
- 1 analogue output and 2 analogue inputs for connection to speed potentiometers and panel meters
- Internal dynamic brake switch as standard

## Modbus/RS485 communication

- Connection to Parker PDB drive setup and monitoring tool
- Connection to PLC or other Modbus RTU / RS485 network

## Suited to all environments

- Optional Internal EMC filter allows use in C3 industrial environments
- Conformal coating provides protection in arduous class 3C3 environments
- Global availability and support
- 50 °C operating temperature
- Fan-cooled heatsink, convection cooled electronics

## AC10 Drives Range

One of the smallest micro-drives available and with five different frame sizes covering a power range of 0.2 kW through to 15 kW, AC10 is a low-cost, compact solution for simple AC induction motor control in a wide range of applications across a host of different industries.

## Extra power when it's needed

- 150 % overload for 60 seconds at 0.5 Hz to provide extra starting torque for shifting high inertia loads
- Output power can be uprated for operation in lower ambient temperatures

### Simple or enhanced performance

- Simple V/Hz control for general energy saving applications
- Enhanced auto-tuning sensorless vector control providing higher dynamic performance for applications requiring greater speed or torque accuracy

### All at the touch of a button

- Standard ergonomic keypad providing full access to all drive functions
- 4 LEDs provide instant indication of drive status
- Remote mountable keypad option for ease of setup and operation
- Simple out of the box operation thanks to integrated macros and quick start guide

### High Speed Operation

- Up to 650 Hz output for high speed operations such as spindles, centrifuges, mixers etc.

### Choice of operating voltages

- 230 V single and three phase input up to 2.2 kW
- 400 V three phase input from 0.2 kW through to 15 kW

### Compact Dimensions

- When compared to other micro drives of similar functionality, AC10 is noticeably more compact reducing cabinet space and freeing up valuable floor space.

### Control at your fingertips

AC10 comes complete with an ergonomic operator keypad as standard featuring 4 LED drive status indicators, a 4 digit 7 segment LED display and a tactile membrane style keypad. In addition to displaying status and running information, the LED display is also used to access drive configuration parameters which can be quickly and easily changed via the keypad. The keypad can also be used to take local control of the motor to start, stop, increase or decrease motor speed. An optional keypad is also available and can be mounted remotely from the drive.

## Applications

AC10 provides a no-fuss approach to general purpose industrial motor control applications across a wide range of industries, giving users the benefits of the inherent energy-saving properties of using a variable speed drive, as well as the improved reliability and extended service life benefits associated with smoother starting and stopping of regularly cycling loads.

### Typical applications for AC10 include...

- Conveyor
- Centrifuge
- Fans
- Mixers
- Packaging Machines
- Textile Machines
- Strapping Machines
- Labelling Machines
- Industrial Washing Machines
- Machine Tool Spindles
- Roller Doors

## Accessories and Options

### Remote Mounting Keypad

The remote mounting keypad allows users to mount the keypad away from the drive, such as on the door of an electrical enclosure, allows users to configure, operate and monitor the drive without having to access the drive directly.

The remote keypad provides the same functionality as the drive mounted keypad and is connected to the drive via a 1.5 m cable plugged into the port on the left hand side of the drive.

Order Code	Description
1001-00-00	Remote Keypad

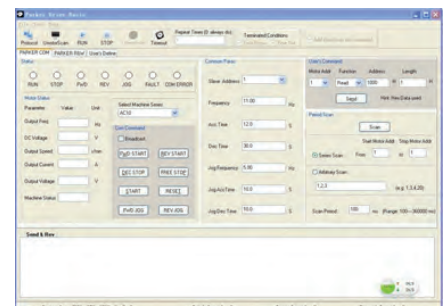

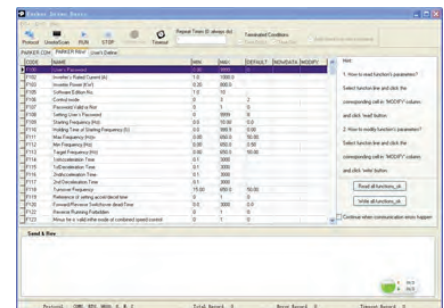

## Software - Parker Drive Basic (PDB)

### Configuration and Diagnostic Monitoring Software

Parker Drive Basic is a monitoring and configuration software tool for use with AC10 Variable Speed Drives.

Connecting to the AC10 over Modbus, Parker Drive Basic enables users to import, modify and export drive parameters as well as providing a convenient means of starting, stopping and monitoring the operation of the drive.

Note: an RS232/RS485 adapter is required to enable connection between PC and drive

## Output Choke

To reduce capacitive currents and prevent nuisance tripping in installations with longer cable runs, a choke may be fitted to the drives output in series with the motor.

## EMC Filter

A range of custom designed optional EMC (Electromagnetic Compatibility) filters are available for use with AC10. They are used to help achieve conformance with EMC directive BS EN61800-3.

AC10 can be ordered with an EMC filter fitted that meets the requirements of a class C3 environment. For class C2 or C1 environments, please contact your local sales office.

## Braking Resistor

During deceleration, or with an over-hauling load, the motor acts as a generator. Energy flows back from the motor into the DC link capacitors within the drive, causing their voltage to rise. If this voltage exceeds a maximum value, the drive will trip to protect the capacitors and internal power devices. The amount of energy that can be absorbed by the capacitors can vary between different applications causing the drive to trip on overvolts. To increase the drive's dynamic braking capability, high power resistor(s), connected across the DC link, allow the dissipation of this excess energy for short term stoppage or braking.

### Brake resistor selection

Brake resistor assemblies must be rated to absorb both peak braking power during deceleration and the average power over the complete cycle.

$$\text{Peak braking power} = \frac{0.0055J \times (n_1^2 - n_2^2) (W)}{t_b}$$

$$\text{Average braking power } P_{av} = \frac{P_{pk} \times t_b}{t_c}$$

J: total inertia [kgm<sup>2</sup>]  
n<sub>1</sub>: initial speed [min<sup>-1</sup>]  
n<sub>2</sub>: final speed [min<sup>-1</sup>]  
t<sub>b</sub>: braking time [s]  
t<sub>c</sub>: cycle time [s]

### Resistors above 500 W

Resistors above 500 W are available upon request :

- IP20 protection up to 3 kW
- IP13 protection between 4.2 and 9.8 kW
